DESCRIPTION: CMT Series

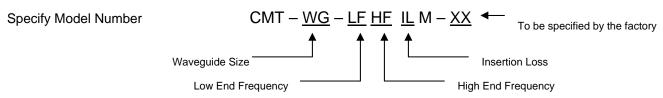

Cernex's CMT series E/H hybrid tees consist of three mutually perpendicular flanged sections of a standard waveguide. Two of these sections are symmetrically located on the broad and narrow walls of the main tee section to provide E-plane and H-plane connections. The internal geometry of these hybrids provides a power-dividing and phase-inverting characteristic. Power applied to the shunt H-plane arm is divided between the tow in-line ports of the main tee section to result in equal power, in-phase output signals. Power applied to the series E-plane arm is also divided between these two ports, but with a phase reversal which provides equal-power, opposite-phase outputs. With symmetrical construction, good isolation is maintained between the E-plane and H-plane arms. The CMT series hybrid tees are available in standard waveguide sizes from 2 to 220 GHz.
